

Case Study

# AKATI Security Supercharges its Threat Detection and Response with Stellar Cyber

AKATI Security offers various security services to customers worldwide as a trusted partner and go-to resource for all things security. Frustrated with the wasted time and effort of creating threat detection rules for several different SIEM products, AKATI Security sought a single platform that could deliver an out-of-the-box standardized threat detection solution. Upon learning about Stellar Cyber and its product, AKATI Security decided to utilize the Stellar Cyber open and unifying SecOps platform as their new security services platform, resulting in improved analyst effectiveness and better threat detection for their customers — a win-win.

## About Akati Sekurity

AKATI Sekurity is a managed security services provider (MSSP) headquartered in Kuala Lumpur, Malaysia, with locations in Hong Kong, Singapore, and Sri Lanka. The 200-employee security services business works with organizations in the financial, healthcare, and manufacturing industries to deliver the highest-quality customer experience possible. Over the years of appeasing customers' security needs, AKATI Sekurity has become a trusted advisor when it comes to anything cybersecurity related.

The backbone of many of AKATI Sekurity's services involves managing a SIEM product that customers had either already deployed or that AKATI Sekurity deployed for the customer. In most cases, the primary product in use was a popular tool known for its ability to deliver many use cases — so long as users had experience writing code. Frustrated with the steep learning curve, high costs, and complexity of identifying threats, AKATI Sekurity sought to standardize on a platform that delivered comprehensive threat detections out of the box, eliminating the need for security analysts to devote significant time to this task.

### Before

#### Wasted Time

Analysts spent significant time building a library of threat detections for products.

#### Manual

Threat identification relied on expert personnel skills and experience.

#### Learning Curve

Bringing new analysts aboard took a long time as it was difficult for them to learn how to use and manage the SIEM products they used to deliver services.

### With Stellar Cyber

#### Efficiency Gains

Since the open and unifying SecOps platform provides broad threat coverage out of the box, analysts no longer waste time writing threat detection rules.

#### Automation

Automatic triage and investigation let analysts automatically hunt for threats and apply response actions, driving better customer satisfaction.

#### Intuitive

The solution's ease of use means lesser-experienced personnel can now participate in delivering services to customers faster.

## After Stellar Cyber

After meeting with Stellar Cyber to discuss their specific needs, Stellar Cyber delivered a comprehensive end-to-end demonstration of the power of the open and unifying SecOps platform. The case studies and live demonstrations proved the solution:

- Delivered broad threat coverage out of the box
- Eliminated many manual processes and tasks
- Simple enough to use that anyone in the SOC could participate

First, Stellar Cyber automatically normalizes and enriches data from every sensor and security tool used by AKATI Sekurity upon ingestion into the platform. Then, Multi-Layer AI™ engines automatically evaluate and group related alerts and identify new threats based on abnormal user and asset behaviors, producing a prioritized list of contextual incidents on the platform's intuitive dashboard.

Based on the discussions and live demonstrations, AKATI Sekurity selected the platform as the new hub of its security operation activities. Going forward, all new AKATI Sekurity customers would be deployed on the open and unifying SecOps platform, saving analysts significant time and effort. Now, after more than a year on the platform, AKATI Sekurity is seeing benefits every day. In particular, the open nature of the platform enables AKATI Sekurity to bring on new customers confidently, knowing that integrating the customer's security products into the platform is straightforward.

**“When I saw the Stellar Cyber open and unifying SecOps platform, I knew I was seeing something ahead of its time; no one was doing what Stellar Cyber was offering**

**The detection in Stellar Cyber is top-notch. I had to have analysts create rules with other products but not Stellar Cyber. What we need is already in the platform.**

## Outcome

In short, the AKATI Sekurity and platform partnership grows stronger with each passing day and will continue to do so in the future. The platform delivers comprehensive, unified security without complexity, empowering lean security teams of any skill level to successfully secure their environments. With the unified platform, organizations reduce risk with early and precise identification and remediation of threats while slashing costs, retaining investments in existing tools, and improving analyst productivity – delivering an 8X improvement in mean time to detect (MTTD) and a 20X improvement in mean time to remediate (MTTR).

## About Stellar Cyber

**Stellar Cyber's open and unifying SecOps platform delivers comprehensive, unified security without complexity, empowering lean security teams of any skill to successfully secure their environments.**

With Stellar Cyber, organizations move from manual, alert-driven operations to a human-augmented autonomous SOC that identifies, validates, and responds to risk with speed and precision. Customers reduce false positives by more than 80%, improve analyst productivity, and lower operational costs –while retaining existing security investments and gaining measurable improvements in risk reduction and response consistency. The company is based in Silicon Valley.
